EDUCATION

Dom Bosco Institute of Higher Education Maputo, Mozambique
Bachelor of Science in Computer Programming *Mar. 2023 – Expected 2027*

EXPERIENCE

STEMMOZ | Robotics & Programming Mar. 2026 – Jul. 2026

STEM Education and Technical Support

- Assembled and programmed educational robots using Arduino, Avishkaar, and REV Robotics platforms.
- Supported programming and robotics teaching activities and provided technical assistance during technology events.
- Contributed to an AI solution for real-time posture analysis at the VisionHer event.

Clardia Tours | Front-End Developer Oct. 2025

Tourism platform | clardiatours.com

- Developed and maintained responsive user interfaces for a tourism platform.
- Built reusable tour-package showcase components by rendering structured JSON data, improving maintainability.
- Applied responsive design and UI performance practices to improve the user experience.

ITC Trainee Instructor | Web Development Sep. 2026 - Present

- Started teaching the module Developing Web Applications with JavaScript.
- Currently teaching Using JavaScript Libraries, covering practical use of JavaScript libraries in web development.

PROJECTS

Stock Management System | STEMMOZ July 2026 - Present

NestJS, TypeScript, PostgreSQL, Supabase, Next.js, Docker

- Developed a stock-management software with role-based access for administrators, stock managers, and operators.
- Designed relational data structures for kits, components, categories, and inventory quantities.
- Integrated PostgreSQL through Supabase and prepared containerized deployment and CI/CD workflows.

BookStore Microservices | E-commerce Platform In progress

NestJS, TypeScript, Sequelize, MySQL, RabbitMQ, Redis

- Designing a distributed e-commerce architecture for bookstore management using decoupled NestJS microservices.
- Implementing event-driven communication between services with RabbitMQ, complemented by Redis.
- Modeling relational data with Sequelize and MySQL across independent services.

TimeNest | Time-Capsule Application 2025

Next.js, Node.js, MongoDB, node-cron, Nodemailer

- Built a web application for time-capsule messages with scheduled background processing and email delivery.

SMS Spam Classifier | AI Learning Agent

Python, Scikit-Learn, Pandas, Naive Bayes, Joblib, NLP

- Built an intelligent spam/ham SMS classifier using Multinomial Naive Bayes that improves its performance over time.
- Implemented an NLP pipeline to clean raw text and extract term frequencies with Pandas and Scikit-Learn.
- Persisted trained probability models with Joblib to support real-time inference.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL
Web Technologies: Css
Runtime & Frameworks: Node.js, React, Express, NestJS
Databases: PostgreSQL, MySQL, MongoDB, Redis
Developer Tools: Docker, Git, GitHub, CI/CD, Supabase, VsCode
Methodologies: Scrum, Agile, Clean Code, Waterfall

LANGUAGES

Portuguese(fluent) | Xichangana: Not specified | English: Intermediate (B1)
